

Defense Readiness Reporting System (DRRS)

Mission readiness and capability assessment

Core Competencies

Agile Software Development
Defense Readiness Reporting
Net-Centric Enterprise Solutions

Development & Support
Business Intelligence
Onsite Customer Support & Training

A mission-focused, capabilities-based web application that provides Combatant Commanders, military services, Joint Chiefs of Staff, and other senior DoD officials a collaborative environment in which to evaluate the readiness and capability of the U.S. Armed Forces.

The Defense Readiness Reporting System (DRRS) initiative is based on the mission essential task construct and readiness metrics that indicate a command's ability to execute specified missions—from humanitarian assistance to major combat operations.

Near real-time mission critical data is aggregated from a wide range of Service and Defense Agency authoritative sources, including measures for personnel, equipment, training, supply and ordinance. Data is presented in intuitive information displays that allow senior leaders to improve analysis and assessment of their command's capability to perform assigned missions.

DRRS is a dynamic, evolutionary initiative aimed at providing Department of Defense users the highest level of readiness reporting, collection, display and analysis for readiness assessment and planning.

Critical Readiness Data

DRRS provides a powerful tool for tracking, monitoring and accessing critical readiness assessment data—fast.

- ✓ Overall mission readiness and individual task readiness
- ✓ Organizational and hierarchical
- ✓ Personnel, equipment, training, ordnance, and supply
- ✓ Availability and current location (last reported)

To learn more about DRRS and our capability-based readiness assessment solutions, contact a product specialist today by calling (619) 955-5800 or visiting www.innovasi.com.

DRRS captures detailed readiness data from combatants and support commands to assess DoD current and projected warfare mission capability.

DRRS was developed to improve the efficiency of readiness reporting by merging previously unrelated data environments with the various reporting assessment metrics into one authoritative source. The result is a powerful solution that establishes a common language of tasks, conditions and standards to provide critical readiness and capabilities data essential for risk assessment and mission success.

What We Do

InnovaSystems International is a leading provider of information technology and software solutions for the U.S. Department of Defense, the Office of the Secretary of Defense and other federal, state and local government agencies. Designed to support the National Security Strategy, we develop capability-based readiness assessment solutions by optimizing disparate data sources and operational systems to reduce costs, maximize efficiencies and streamline access to critical data.
